1. Introduction

Welcome to Gold Hitter EA V4.0, designed to enhance your trading performance on the MetaTrader 4 platform. This manual guides you through installation, configuration, and optimal usage practices

2. System Requirements

- MetaTrader 4 platform
- Windows 7 or higher
- Minimum 512 MB RAM
- Stable internet connection
- VPS (Virtual Private Server): Required for 24/5 operation to ensure the EA runs continuously without interruptions due to computer or internet downtime.

3. Quick Start Tips

- Test the EA on a demo account first to observe its functionality risk free.
- VPS for Best Performance: For stable 24/5 operation, we recommend using a Virtual Private Server (VPS).
- Default Settings Recommended: Use default settings for optimal results

3. Installation Guide

- **Step 1:** Copy the EA file into the MQL4/Experts directory in your MetaTrader 4 installation folder. File → Open Data Folder → MQL4 → Expets
- **Step 2:** Refresh your navigator or restart MetaTrader 4 to recognize the new EA.

- **Step 3:** Activate DLL , Tools → Options → Expert Advisors → Check "Allow DLL imports" → OK

4. How to Use

- **Chart Setup:** Apply the EA to the XAUUSD (Gold) chart using the M5 (5-minute) timeframe.
- **Activation:** Enter the email address used to purchase the EA into the EA's settings dialog as part of the activation process. This is required to verify your license.
- **Adjusting Parameters:** Use default, fast set or the propfirm set.

4. Risk Management Features

- Trading carries inherent risks; Gold Hitter EA V3.9 includes a Drawdown Controller for risk mitigation. Utilize 'Total % Risk to EquityStop' in the settings to define drawdown limits, safeguarding your investments against market volatility. Regular EA updates strive to keep pace with market shifts, optimizing performance
